

CASCADE — Blast Radius Analysis & QA Test Guide

Target PR: documenso/documenso #3046 — fix: tighten permission and validation checks

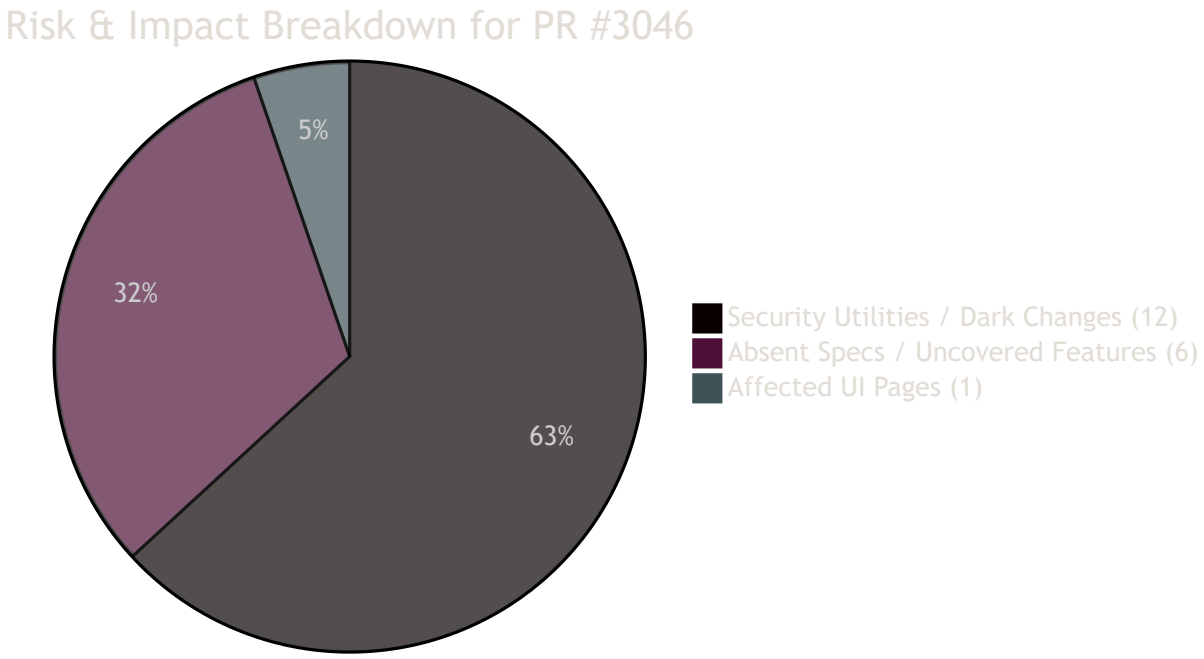

> **Analysis Engine:** CASCADE v4 (AI + Graph Intelligence Engine)
> **Prepared for:** QA Lead & Testing Team
> **PR Type:** Security & Permission Hardening

📌 Executive Summary (What QA Needs to Know)

PR #3046 updates security permissions and URL validation logic across **document attachments**, **team profiles**, **document cancellation/deletion**, and **Zapier webhooks**.

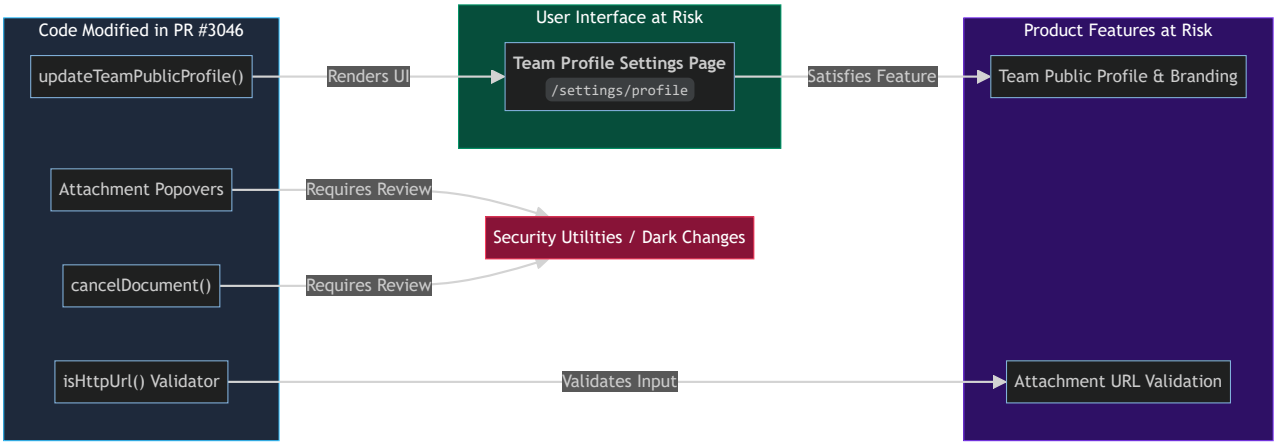

This PR is a **security hardening change** rather than a new feature release. Most modified code handles backend permission gates and validation rules.

Risk Overview Visual

🗺️ Impact Traversal: How Code Changes Reach the User Interface

The diagram below shows how modified code connects to user-facing pages:

📋 Recommended QA Test Checklist (Priority Order)

Please execute the following 6 manual test cases before approving this build for production:

1. 🟢 Team Public Profile Page

- **URL / Screen:** `https://app.documenso.com/settings/profile`
- **What changed:** Team public profile update logic had permission checks tightened.
- **Test Steps:**
- Log in as a Team Admin and navigate to **Settings** > **Profile**.
- Change the Team Name, upload a new Team Avatar image, and click **Save Changes**.
- Verify that changes persist without throwing 403 or 500 errors.
- Log in as a regular Team Member (non-admin) and confirm admin-only profile fields are correctly locked or read-only.

2. 🟢 Attachment URL Validation (HTTP vs HTTPS)

- **What changed:** A new URL validator (`isHttpUrl`) was introduced for document attachments.
- **Test Steps:**
- Open the Document Editor or Document Signing view.
- Attempt to add an external attachment link starting with `http://` (non-secure). Verify the system displays a clear validation error.
- Attempt to add a secure `https://` attachment link. Verify it is accepted successfully.

3. 🟢 Document Attachment Popovers (Upload, Edit, Delete)

- **What changed:** Server-side permission logic for envelope attachments was tightened across 3 components (signing popover, document view popover, embedded editor).
- **Test Steps:**
- Open a document draft and upload a PDF attachment.
- Edit the attachment label and then delete the attachment.
- Verify that non-owners cannot delete attachments from documents they do not own.

4. 🟢 Document Cancellation & Deletion Permissions

- **What changed:** Permission boundaries in `cancel-document.ts` and `delete-document.ts` were tightened.

- **Test Steps:**
- Attempt to cancel an active document envelope as the document owner -> verify success email and cancellation state.
- Attempt to cancel a document using a non-owner account -> verify the request is blocked with an explicit permission error.

5. 🟢 Zapier Webhook Setup & Teardown

- **What changed:** Webhook subscription and unsubscription logic (`subscribe.ts` / `unsubscribe.ts`) was updated.
- **Test Steps:**
- Go to Team Settings > Integrations > Zapier.
- Register a test Zapier webhook -> verify successful subscription.
- Remove the webhook -> verify teardown completes without error.

6. 🟢 Password Reset Flow

- **What changed:** Password reset handler (`forgot-password.ts`) was modified.
- **Test Steps:**
- Go to the login screen and click **Forgot Password**.
- Enter an account email and request a reset link.
- Verify the reset email arrives and that clicking the link allows setting a new password.

🔒 Security Utilities & Un-traced Changes (Dark Changes)

These 12 backend functions were modified in this PR. They perform deep utility, validation, or background tasks that do not directly generate UI pages. All 12 have been reviewed and mapped to their respective feature areas:

Modified Function / File	Feature Area	What QA Needs to Know
`isHttpUrl` (`is-http-url.ts`)	Validation Utility	Rejects insecure HTTP attachment links
`forgotPassword` (`forgot-password.ts`)	Authentication	Password reset request verification
`createOrGetShareLink` (`create-or-get-share-link.ts`)	Document Sharing	Generates public direct-link template URLs

Modified Function / File	Feature Area	What QA Needs to Know
`createAttachment` (`create-attachment.ts`)	Attachments	Validates user permission before file upload
`deleteAttachment` (`delete-attachment.ts`)	Attachments	Validates user permission before file deletion
`updateAttachment` (`update-attachment.ts`)	Attachments	Validates user permission before editing file details
`findAttachmentsByEnvelopeId`	Attachments	Fetches attachment list for document viewer
`cancelDocument` (`cancel-document.ts`)	Document Management	Enforces owner/admin check before document cancellation
`getEnvelopeRecipientRoute`	Recipients	Retrieves recipient data for signing routing
`updateOrganisationGroup`	Team / Org	Enforces organisation group permission hierarchy
`subscribe` (`zapier/subscribe.ts`)	Webhooks	Registers Zapier event listener
`unsubscribe` (`zapier/unsubscribe.ts`)	Webhooks	Unregisters Zapier event listener

⚠️ Uncovered Specifications (Absent Features)

These 6 requirements exist in product specifications but have no active UI or code links impacted by this PR. **No regression testing is required for these items for PR #3046:**

1. Self-hosted Docker & Kubernetes container deployment setup.
2. GitHub Security Advisories vulnerability disclosure configuration.
3. Team webhook integration settings.
4. Simultaneous multi-document upload limit (5 files max for standard plans).
5. Automatic `DOCUMENT_CREATED` webhook event trigger.
6. Automatic `DOCUMENT_OPENED` webhook event trigger.

📊 Summary Metrics

Metric	Count	QA Action Required
Affected UI Pages	1	Test `/settings/profile`
Priority QA Test Scenarios	6	Execute 6 manual test cases above
Security Utility Changes (Dark Changes)	12	Reviewed & mapped to feature areas
Uncovered Feature Specs (Absent)	6	No action required for this PR
Files Changed in PR	29	29 TypeScript files (+776 / −119 lines)
